Key Findings:

Employee Overview :

The dashboard provides an overview of employee demographics, job levels, education, marital status, and income. Employee characteristics can be compared across different HR dimensions.

Attrition Analysis:

Attrition is analyzed across overtime, job satisfaction, environment satisfaction, job involvement, tenure, and business travel. These factors help identify patterns among employees who left the organization.

HR Insights:

The analysis can help HR understand employee turnover patterns. The findings can support targeted employee-retention and engagement initiatives. The project brief specifically describes analyzing factors such as department, job level, salary, tenure, performance, and demographics to understand attrition and develop actionable insights.

Conclusion:

HR Analytics Dashboard provides a consolidated view of employee characteristics and attrition patterns. By analyzing demographic, job-related, satisfaction, compensation, and work-environment factors, HR teams can better understand employee turnover and identify areas for improving employee engagement and retention.
